

# TOURER SC

The Tourer may be a tough customer, but the interior is a pleasing blend of luxury, comfort and practicality. The interior finishes are tasteful and inspired by the bush.

The floor is heavy duty vinyl cushion.

There is loads of cupboard and counter space plus comfortable sleeping accommodation for four. Interior lighting is provided from the Tourers built in battery system.

The pull out kitchen has a 2 burner stove plus a wash-up with running water and the fridge/

freezer can be accessed from both inside and outside. The front lockable storage compartment houses the gas bottle and spare wheel and has space for odds and ends you prefer not to put in the van or in your car.

The protection bars under the Tourer give it a rugged look but truly earn their stripes when the going gets rough. And should you end up on an electrified site, there is an external 220V multiplug that will run all the electrics in the van (including the fridge) while charging the vans battery.
